

**SYSCTL SECURITY PRODUCTS DEADDROP AND IMPEX
TWO OF THREE FINALISTS IN SWEDISH SECURITY
AWARDS CATEGORY IT-SECURITY SOLUTION OF
THE YEAR**

The Swedish magazine "Skydd & Säkerhet", (Protection and Security) hosts the annual Security Awards gala in Stockholm, nominating companies and individuals in 14 different categories for groundbreaking work within the area. Winners will be announced during Security Awards on September 17th.

The SYSCTL designers have managed to get two out of three nominations in one category, an unusual event they are proud of:

-” We are of absolutely thrilled about these nominations, says co-founder Robert Malmgren, they are definitive indicators that we are on the right track. Both products come into existence based on real-world needs and they solve real, existing, problems.”

About the products

Deaddrop is a web based secure file transfer appliance. It is designed from the ground up with security in mind. Operating system, sub system, web server and web applications are all hardened. The deaddrop application is used to transfer files between single persons or groups of persons as easy as possible. Usability and awesome security features, was key design properties built-in from the beginning.

IMPEX USB Protection was developed to handle movable media used in sensitive environments. It can be viewed both as a technical security control, as it allows for checking devices and files for malicious code. But more importantly it is also a strong policy enforcement tool, so import or export of information can be controlled based on rules that implement the information handling policies of the organization.
